

## **UNDP is hiring an eHealth System Assistant !**

UNDP works in 170 countries and territories to eradicate poverty and reduce inequality. We help countries to develop policies, leadership skills, partnering abilities, institutional capabilities, and to build resilience to achieve the Sustainable Development Goals. Our work is concentrated in three focus areas: sustainable development, democratic governance and peace building, and climate and disaster resilience.

Recognising the importance of modernising the healthcare system, the Ministry of Health and Wellness (MoHW) and UNDP has placed a priority on digital transformation. This ongoing initiative seeks to streamline work processes, optimise resource allocation, and improve the efficiency and overall quality of healthcare services while also aiming to enhance patient engagement and foster a sense of responsibility.

Situated at Anglo Mauritius House, Intendance Street, Port Louis

Duties are as follows:

Posted at regional hospitals, the UNVs must assist the Systems Analysts and/ or Senior Systems Analysts in the performance of their duties.

- Maintain the list of ICT equipment within the health region.
- Support in performing database, network and systems administration and to set up and manage users, groups and roles.
- Assist end-users in performing acceptance testing of applications developed by suppliers.
- Support in taking preventive measures to ensure adequate capacity and availability of storage and computing systems and monitor performance to ensure optimum efficiency.
- Assist in providing and maintaining up-to-date documentation of implemented systems such as regard technical, user, procedure and operational manuals.
- Assist in setting up and configuration of computer systems and in infrastructure deployment and site preparation.
- Troubleshoot computer hardware and software, diagnose the problem, perform repairs or adjustments, provide guidance and support to users.
- Assist in implementing security measures to safeguard IT systems from threats and to ensure business continuity in collaboration with all stakeholders.
- Conducting basic troubleshooting of hardware, software, and network issues.
- Provide user support and training for hospital staff.
